SUMMARY

Recent Computer Science graduate with hands-on experience building Java and AWS-based distributed systems. Proven track record designing microservices, optimizing CI/CD pipelines, and debugging production workloads at scale. Passionate about operational excellence, customer-obsessed engineering, and taking end-to-end ownership of software delivery.

EDUCATION

University of Texas at Austin

Austin, TX

B.S. in Computer Science | GPA: 3.72 / 4.00

Aug 2021 - May 2025

- * Relevant coursework: Distributed Systems, Cloud Computing, Algorithms & Data Structures, Operating Systems, Software Engineering, Databases
- * Dean's List - Fall 2022, Spring 2023, Fall 2024

TECHNICAL SKILLS

Languages: Java (proficient), Python, TypeScript, SQL, Bash

AWS Services: EC2, S3, Lambda, SQS, SNS, DynamoDB, RDS, CloudWatch, IAM, ECS, API Gateway

Frameworks: Spring Boot, JUnit 5, Mockito, Node.js, React

DevOps / CI-CD: GitHub Actions, Jenkins, Docker, Kubernetes (EKS), Terraform, AWS CDK

Practices: Microservices, REST APIs, Event-driven architecture, TDD, Agile/Scrum

Tools: IntelliJ IDEA, Git, Postman, Datadog, PagerDuty, Jira, Confluence

EXPERIENCE

Amazon Web Services (AWS) - Software Development Engineer Intern

Seattle, WA

EC2 Networking Team

May 2024 - Aug 2024

- * Designed and implemented a Java Spring Boot microservice to aggregate VPC flow-log metrics, reducing alert noise by 34% and cutting on-call escalations by 2 per week.
- * Wrote 140+ JUnit 5 / Mockito unit tests achieving 92% code coverage; identified 3 race conditions prior to production release.
- * Refactored SQS consumer to process messages in parallel batches, improving throughput by 2.4x under peak load (benchmarked via CloudWatch custom metrics).
- * Authored two runbooks adopted by the on-call rotation; reduced mean time-to-resolution (MTTR) for P2 incidents by 18 minutes on average.
- * Presented internship deliverable to senior engineers and two L7 bar-raisers; received return offer for full-time SDE-I position.

Cloud Infrastructure Automation Team

Jun 2023 - Aug 2023

- * Built a Python + Terraform automation pipeline to provision AWS EC2 + RDS environments, cutting developer onboarding time from 4 hours to 22 minutes.
- * Integrated pipeline into Jenkins CI/CD; added automated drift-detection that flagged 11 out-of-compliance resources across staging environments.
- * Collaborated with a 5-person cross-functional Agile team; demoed project to VP of Cloud Engineering at sprint review.

PROJECTS

DistributedKV - Fault-Tolerant Distributed Key-Value Store

github.com/aidantorres-dev/distributedkv

- * Implemented Raft consensus algorithm in Java across a 5-node cluster achieving 99.97% availability in chaos-testing (random node kills, network partitions).

- * Integrated gRPC transport layer; p99 read latency of 4 ms at 1,000 concurrent clients.
- * Deployed on AWS ECS with CloudWatch dashboards and PagerDuty alerting for leader-election failures.

CloudBudg

- * Architected event-driven pipeline: S3 -> Lambda (Java) -> DynamoDB -> SNS email alerts; detects anomalies via rolling Z-score with configurable sensitivity thresholds.
- * Deployed via AWS CDK across 3 accounts; surfaced \$1,200 in untagged resource waste during the first week of monitoring.
- * GitHub Actions workflow handles Lambda packaging, integration tests, and canary deployments with automatic rollback on failure.

CERTIFICATIONS & AWARDS

- * AWS Certified Developer - Associate (DVA-C02) | Issued Jan 2025
- * AWS Certified Cloud Practitioner (CLF-C02) | Issued Mar 2024
- * 1st Place - UT Austin HackTX 2024 (Best Cloud Infrastructure Project)
